Princeton University, **A.B. in Computer Science, GPA: 3.72** *Expected Graduation: May 2027*

Minor: Environmental Studies

Work Experience

SIFP Head Fellow

Princeton Emma Bloomberg Center for Access and Opportunity | Princeton, NJ | Jan. 2026 – Present

- Provides personal, professional, and academic support to mentees through inclusive leadership and ongoing mentorship through organizing weekly group meetings.
- Receives intensive and inclusive leadership training experience, including for instance facilitation, communication, and debriefing skills to better support the mentees.

ACT Tutor

Princeton Tutoring LLC | Princeton, NJ | July 2024 – Present

- Identified students' opportunities for growth, then created personalized short- and long-term plans to achieve their ACT goals through regimented online or in-person tutoring sessions.
- Instructed students in evidence-based ACT strategies that emphasize problem-solving, critical reasoning, and structured study habits, while also strengthening organization and time management habits.

Meteorology Undergraduate Researcher

University of Reading, Department of Meteorology | Reading, UK | April 2026 – Aug. 2026

- Assessed the performance of a novel machine learning feature selection technique for predicting annual tropical cyclone genesis predictions on a global and basin-wide scale.
- Extended the code's functionality to allow for more diverse training datasets by modularizing the temporal and spatial input features.
- Investigated the feasibility of including a more physically informed algorithm to allow for a more dynamical model.

Civil and Environmental Engineering Undergraduate Researcher

Princeton University, Department of Civil and Environmental Engineering | Princeton, NJ | Feb. 2024 – Aug. 2025

- Assessed the performance of new human vulnerability metrics for extreme weather hazards using large data analysis and data visualization methods.
- Cleaned and validated a 20-year, daily, county-level data set using NOAA weather archives and performed preliminary analyses on major coastal cities for compound weather events.
- Scaled the project's analytical scale from county to regional patterns, enabling more robust geographical comparisons.

Projects

Machine Learning Fraud Detector Nov. 2024 – Dec. 2024

Princeton COS226

- Implemented a lightweight ML model using decision stumps and multiplicative weights to detect fraudulent credit card transactions in large sets of data.
- Optimized model efficiency and accuracy using an adaptive boosting algorithm that rewards accurate predictions over a certain number of training data iterations, and a dimensionality reduction algorithm that clusters similar data to minimize overfitting.

Relevant Coursework

Tropical Cyclones and Associated Impacts Jan. 2026 – May. 2026

- Builds a broad foundation for understanding the impacts of tropical cyclones through a multidisciplinary perspective. Discusses associated hazards with these storms with topics including storm surge, inland flooding and heavy rainfall, damaging winds, and compound hazards under current and future conditions, and their societal impacts (e.g., energy, public health).

Climate and Weather: Order in the Chaos Sep. 2025 – Dec. 2025

- Explores the relationship between climate and weather events. Various climatic aspects will be explored, such as energy and water cycling, oceanic and atmospheric circulation and fluxes, solar heating, the El Niño phenomenon, ice ages, and greenhouse gases. This is used to interpret the statistics of several weather events, including heat waves, tropical cyclones, and floods.

Intro to Machine Learning (Python) Sep. 2025 – Dec. 2025

- Provides a landscape of machine learning for further study or independent work in machine learning and data science. Topics include linear models for classification and regression, support vector machines, clustering, dimensionality reduction, deep neural networks, Markov decision processes, planning, and reinforcement learning.

Extracurriculars

TiGHAs Intramural Soccer Team Jan. 2024 – Present

- Co-Captained the "TiGHAs" team founded in 2017, winners of the Princeton International Center's World Cup Tournament in 2024.

American Whig–Cliosophic Society Aug. 2023 – Present

- Engaged in Princeton's oldest political, literary, and debating society with events from prominent speakers and social events.
